

*Let ACI be your source for high-quality, durable, and economical vehicle and fleet graphics*

Whether identifying official vehicles or advertising commercial products and services – no matter how large or small the fleet – turn to ACI. We manufacture the highest quality 3M vinyl fleet markings, precise computer-cut graphics in multiple sizes, multicolor or custom color matched. Application over rivets or corrugations or application of large-scale graphics is no problem with positionable 3M Controltac™ vinyl. Your graphics can even be read at night by using 3M Scotchlite™ reflective vinyl -- not only a memorable, high-impact graphic treatment but also an added measure of safety during night driving.

**Graphics applied by ACI are highly resistant to cracking, peeling and fading!**

Pricing is determined by amount and type of material required and man-hours to fabricate and install. Additional man-hours are assessed if removal of old graphics is necessary. Therefore, it is difficult to quote a firm price in advance, but a best guess estimate can be provided if desired. In order to make the estimate, we need the following information:

- Make, model, and year of vehicle
- Description of graphics package desired
- Colors and type (reflective or non-reflective) of material

Our design team can take graphics from raw concept to finished artwork. From a general design for the truck shown above, our artists created eye-catching graphics for this fleet.
